RAHEE

Week 2 Project Progress Report

Project	RAHEE, an online digital version of a travel board game
Team	Team 31
Current stage	We built the full real time multiplayer version of the game this week. Players now join a shared game using a room code and play from their own device, with a server that enforces every rule and keeps each player's cards private. The game has not yet been deployed and currently runs only on a local network. Four further items raised in this week's meeting with the POC are now planned.

1. Tasks: Completed and Planned

Completed since the previous report:

- Built a working multiplayer version of the game. A Node.js server, using one additional package called ws for WebSocket support, now holds the single authoritative copy of the game state for every room.
- Added room based sessions. A player creates a room and receives a room code made of four characters. Other players join the same room from their own device by entering that code.
- Added a lobby stage before play begins. Each joining player enters a name and picks one of the six characters. Any open seat can pick any character that nobody else has taken. The player who created the room starts the game once every seat has a character.
- Moved the rules engine to run on the server rather than in each player's browser. The same engine code used in the single device version was carried over without changes, so every rule already built and tested continues to work the same way.
- Added a check on every outgoing update before it reaches a player. The full board, the undealt deck and every other player's cards are removed from what a player receives. Other players' hands are shown only as a card count, never the cards themselves.
- Added a check on the server for whose turn it is. An action meant only for the active player, such as playing a card or moving, is rejected if sent by anyone else. Actions a player can take for themselves at any time, such as visiting a tourist place, responding to a road trip invitation, or dropping off a road trip, are checked against that player's own identity instead.
- Added printed card images for each of the six characters. A player now sees the actual character card when choosing a character and during play, instead of only a name.
- Changed the interface so that no action calls the rules engine directly. Every action a player takes is sent to the server as a message, and the screen only updates once the server sends back the confirmed result.

- Tested the game with multiple connected clients and confirmed that room joining, hidden hand privacy and turn based access control all work correctly. Confirmed the game is playable from two devices, or two browser tabs, on the same Wi-Fi network.

Planned, from this week's discussion with the POC:

1. Shortest path to a chosen destination. A player will choose a destination city directly. If that city can be reached within the number of steps allowed by the played card, the game will show the shortest path to it. If the city cannot be reached within that number of steps, the game will show a message stating that the destination is not reachable.
2. A way for players to discuss a road trip, separate from a general chat box. If one player is considering a path or a destination, they should be able to tell another player that information directly, for example naming the path or the destination they have in mind, so the two can discuss a possible road trip before it is offered.
3. Giving the player being invited on a road trip control over where they get off. At present this choice sits with the active player's route. The player who is not driving should be able to choose the city at which they leave the trip.
4. Deploying the game so it can be reached from outside the local network, rather than only from devices on the same Wi-Fi as the server.

2. Problems / Issues:

- The game currently has no way for a player to reconnect. If a player's connection drops during a game, their seat stays reserved, but nothing in this version lets them rejoin it.
- Room state lives only in the server's memory. If the server process restarts, every game in progress is lost. There is no save or resume feature in the multiplayer version yet.
- The tool that used to drive a full game through the browser and take screenshots needs updating for the new lobby flow before it can be used again. Multiplayer behaviour has so far been checked with a small script written for this purpose, rather than a test that is kept in the project and run automatically.
- Movement is still performed one city at a time, by clicking an adjacent city repeatedly. This is the first item raised by the POC and is now planned.
- The game has not been deployed and can currently only be reached by devices on the same Wi-Fi network as the server. This is the fourth item raised by the POC and is now planned.

3. Time Spent by Each Team Member, last Week

Hours are divided equally across the team for the previous week's work, covering the task areas below.

Name	Task(s)	Approx. Hours/week
Tanuj Sharma	Server networking and message handling (server/app.js,	3

	server/handlers.js)	
Sai Gawali	Room and session logic (server/rooms.js, server/protocol.js)	3
Siddhesh Patil	Client connection and screen updates (src/net.js, src/main.js)	3
Mukesh Dewangan	Lobby and character selection screens, and the character card images (src/screens.js, tools/make-cards.mjs)	3
Kshitij Kasodkar	Privacy checks on the server (server/redact.js) and testing the game across multiple connected clients	3

4. Last Meeting with the PoC:

Date of last meeting	30 September 2026 (Wednesday)
Meeting cadence	Weekly, every Wednesday.
Mode	Offline

Key discussion / action items:

1. The game should show the shortest path once a player chooses a destination, instead of requiring one click per step, and should tell the player clearly when a destination is out of reach for the current card.
2. The game needs a way for one player to tell another about a path or a destination they are considering, so the two can discuss a road trip before it is offered, without this being a general chat box.
3. A player invited on a road trip should be able to choose where they get off the trip themselves, rather than this being decided only by the active player's route.
4. The game should be deployed so that it does not depend on every player being on the same Wi-Fi network as the server.

5. Date of the Current Build:

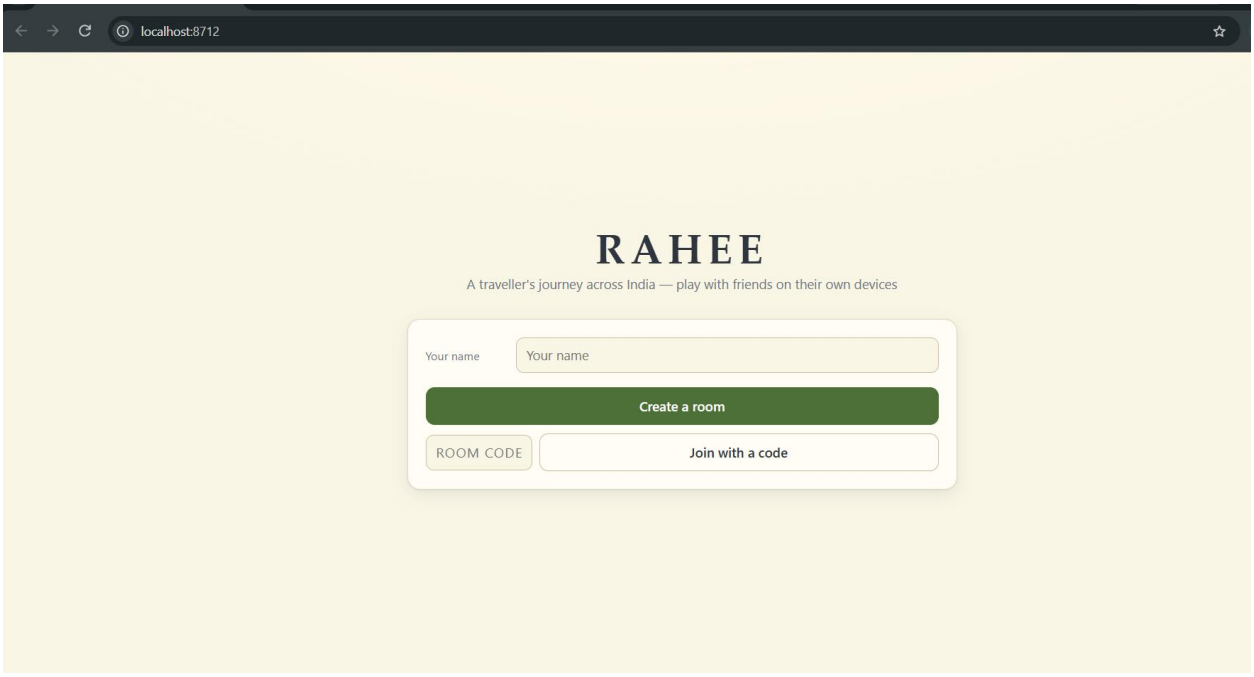

Current build date	30 September 2026
Build / version identifier	Commit 76b3033, main branch

6. Test Results on the Current Build:

Tests are run against the rules engine with a script that plays a large number of complete random games and checks the rules after every one of them. This script was run again on the current build.

Total tests	80 complete random games, each checked against every rule (deck composition, legal movement, scoring, and the two worked examples from the manual)
Unsuccessful tests	0
Successful tests	80

Tanuj, lay a road-trip card
One card from your hand goes face-up in front of you. Others can flip it to take you on a road trip — and its value is how far that trip can go. The rest of your hand stays hidden.
